

wavely predict

TECHNICAL SPECIFICATIONS

Wavely Predict allows you to track the day-to-day health of your pumps, fans, bearings, motors, compressors, turbines and other rotating machinery with vibration monitoring.

FUNCTIONS

Wavely Predict is an **easy-to-install, ready-to-use** system for industrial environments. This solution allows maintenance teams to monitor and access rotating machinery data, 24/7.

The Wavely Predict application alerts users to anomalies detected before downtime can occur.

By using Wavely Predict, maintenance teams can plan their interventions more efficiently while keeping machines running and healthy longer.

Measurements:

Tri-axis vibration: detection of vibration deviations (bearings, gears), axis misalignment, or unbalance in motors, pumps, and fans.

Temperature: Detection of abnormal temperatures

The data is then analyzed by our embedded AI (Artificial Intelligence) and also via our detection models in the Cloud.

Alerts are sent to keep staff informed when anomalies are detected. Exportable reports and CSV file exports ensure data traceability.

ADVANTAGES

1. Quick and easy to install:

- Wireless, compact
- 24/7 surveillance
- Stand-alone (on-board intelligence)
- Easy-to-use following a short period of machine learning
- Up to four years of battery life
- Mounted with a glued or magnetic base

2. Two modes of usage:

From a distance

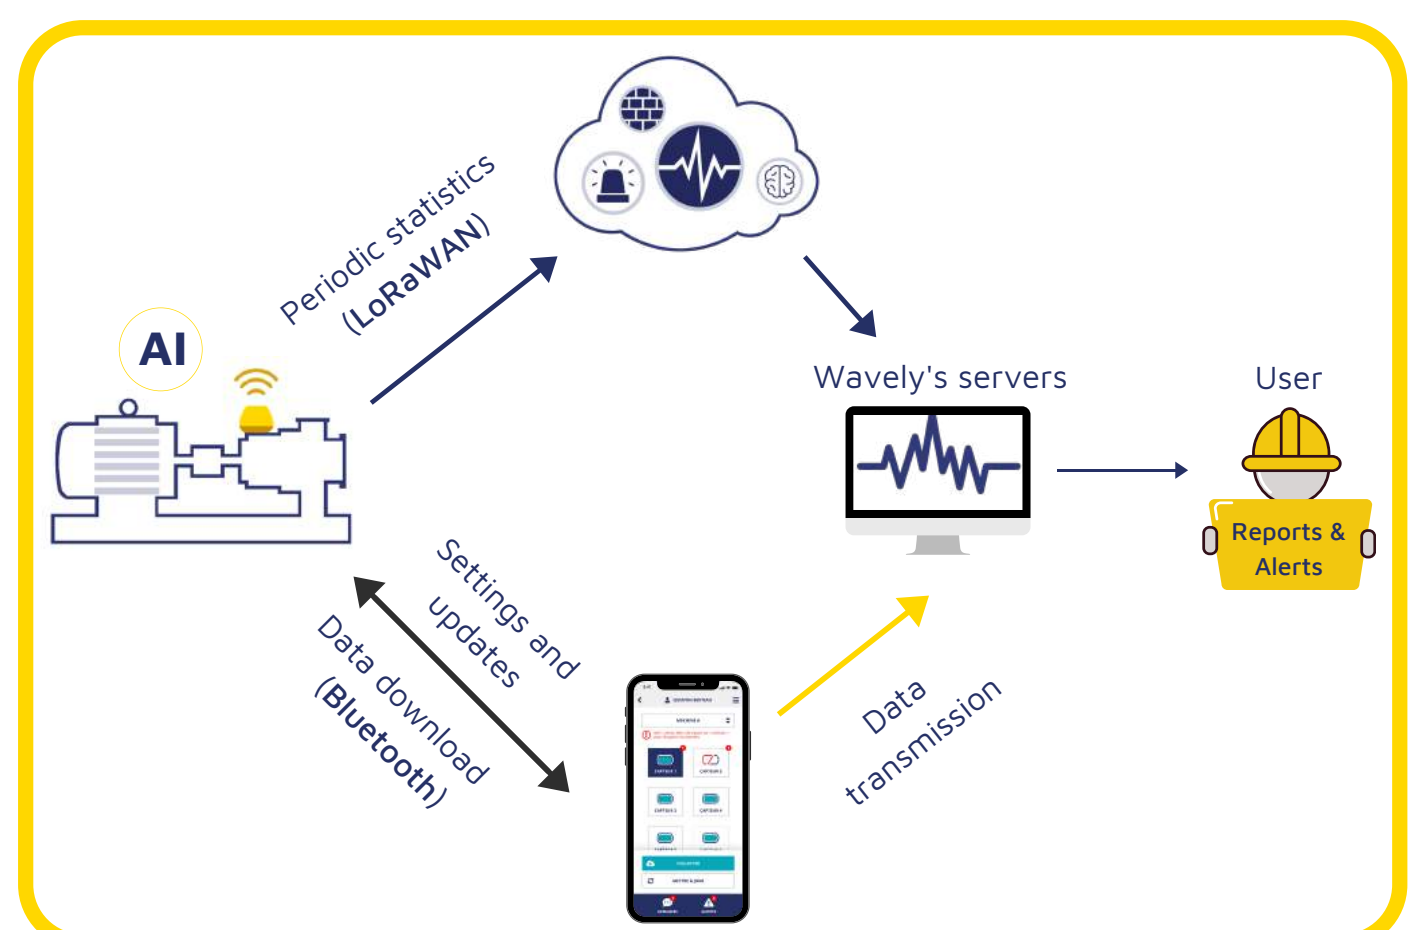

- Data sent periodically to the application
- Artificial Intelligence
- Automatic anomaly detection (after machine learning)

On site

- Real-time measurements
- Data downloads

3. LoRaWAN & Bluetooth connectivity

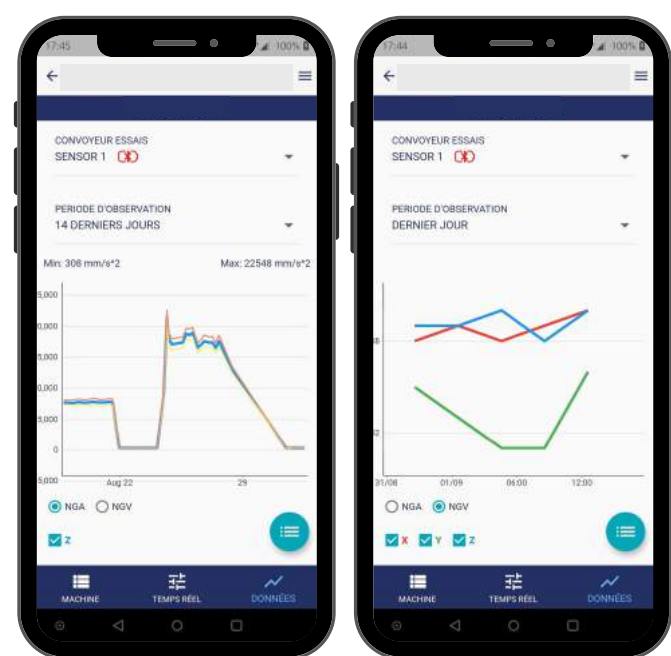

- Long-range LoRa connectivity for alerts and key indicators derived from periodic measurements
- Bluetooth connectivity for real-time full data exports

CONNECTIVITY

The application enables users to:

- Conduct real-time measurements
- Configure sensors
- Update software from a distance
- Receive anomaly detection notifications
- Consult data history
- Download raw data for analysis (CSV)
- Download reports

The Wavely Predict application is available on Android and Apple tablets and smartphones.

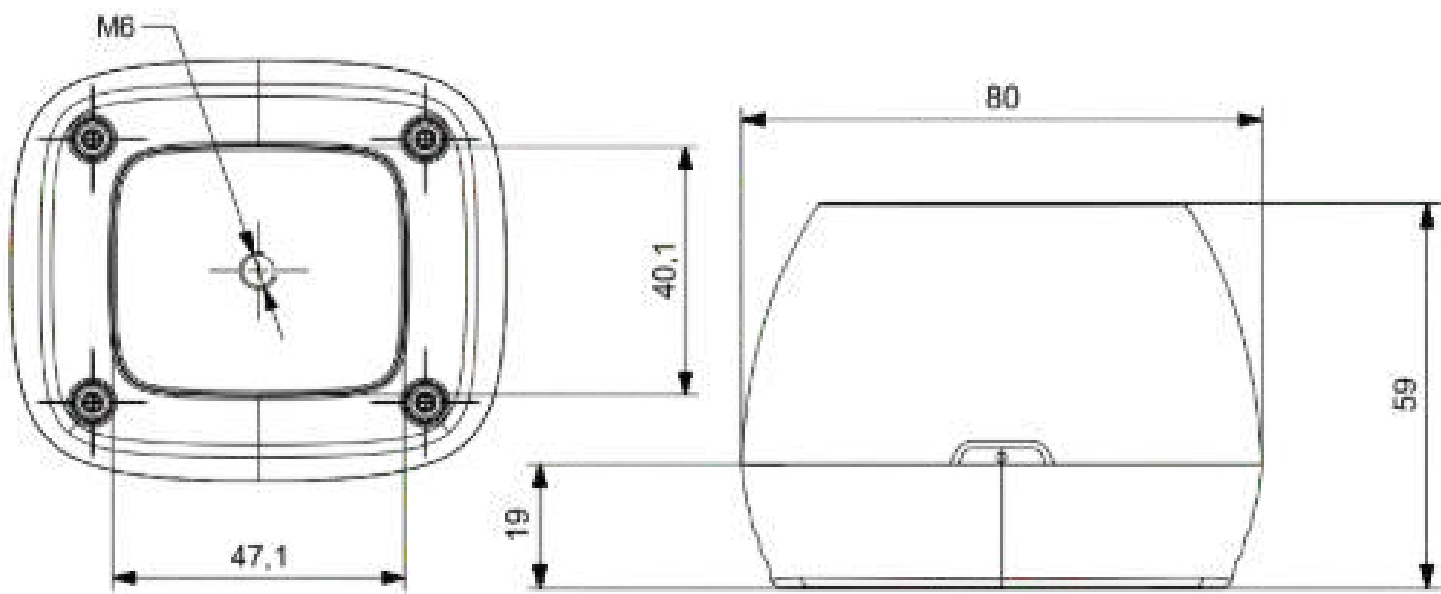

INTERFACE

TECHNICAL SPECIFICATIONS

LED + Button

LED: Indicates Predict's status
Button: Changes the mode and launches the learning phase

QUICK & EASY INSTALLATION

- Identify where measurements should be taken on the machine
- Glue the base or use the magnetic base
- Screw the Predict sensor onto the base
- Launch learning phase
- Monitor machines!

Several types of fixation are possible

- M6 base (glue)
- Magnetic base
- Stud fixed directly on the machine

Vibration	
Measurement range	Up to 16g
Frequency range	6kHz
Sensitivity	50 mV/g
Axes	3 axis
Axes X , Y, Z	6kHz to 16g
Temperature	
Resolution	0.5°C
Measurement range	- 20 / + 80°C
Wireless communication	
Connectivity	BLE 4.2
External communication	
Connectivity	LoRaWAN
Power	
Battery type	D battery
Lifetime	Up to four years
Environment	
Temperature	-40°C to 85°C
Dimensions	80x68x59 mm LxWxH
Weight	250g
Index of protection	IP54
